

Using custom developed software we are able to explore the nearly infinite space of possible configurations that these two prefabricated units afford. By altering the rotation, position and number of accumulated units we are able to produce drastically different designs, a few of which are shown in this image.

Modular Rack_02

The second of these two components is designed to fit the bikes lengthwise. This will allow the maximum amount of bikes to be stored in places where sidewalk space may be limited. Keeping the sidewalks open and safe for pedestrians.
